

Claims

1. (Original) A spectacle kit comprises a pair of lenses made of flexible material joined by a nose bridge portion, and a pair of side arms, each lens having an outer upper portion and an outer lower portion said upper and lower portions being moveable toward one another so as to overlap and form a convex curved portion in each lens characterised by each side arm including a slot suitable for receiving and retaining the upper and lower portions of each lens.
2. (Original) A spectacle kit according to claim 1 wherein the lens material comprises flat sheet material which allows printed matter to be provided thereon.
3. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the lenses comprise coloured or sunlight filtering lenses.
4. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the lenses are provided with a plurality of apertures through which a wearer may see.
5. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the apertures comprise holes.
6. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the apertures comprise slots.
7. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the upper portions and the lower portions may be provided with apertures in their end portions such that the holes are aligned during assembly of the spectacles.

8. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the side arms comprise spigots of a suitable size to receive the aligned holes of each end of the spectacle lens.
9. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the upper portions and lower portions are connected to each other.
10. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the upper and lower portions are connected to each other by a perforated strip.
11. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the upper and lower portions are arranged to overlap one another during assembly.
12. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the spectacle side arms are manufactured from flexible flat sheet material.
13. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the side arms are manufactured from a similar or identical material to that of the lens and therefore be cut out from the same sheet material during the manufacturing process.
14. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the side arms are provided with folds to assist in their assembly.
15. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the side arms are manufactured from rigid plastic material.

16. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the side arms each include a hinge.

17. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein each slot is adjacent the spigot.

18. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the side arms are curved so as to be suitable for gripping the sides of a wearer's head.

19. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the hinge portion comprises a notch so as to enable the side arms to be folded toward one another during use of the spectacles.

20. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the spectacle kit parts are manufactured from the same sheet material and removably attached to a waste portion of such sheet material such that each kit part is removable therefrom

21. (Amended) A spectacle kit according to [any one of the preceding] claim[s] 1 wherein the kit further comprises a nose bridge element formed to be removably attachable to the lenses nose bridge portion.

22. (Original) A spectacle kit according to claim 21 wherein the nose bridge element is manufactured from rigid plastic material.

23. (Original) A pair of spectacles comprises a pair of lenses made from flexible material and a pair of side arms, each lens having an upper arm and a lower arm disposed at its outer edge, said arms at each edge overlapping one another such that each lens is provided with a curved portion characterised by each side arm

including a slot suitable for receiving a corresponding end portion of the pair of flexible lenses.
